Claresholm Local News

Mrs. Bartley is a patient in the local hospital this week.

Albert McCurdy is a patient in the local hospital this week.

Christian Christiansen of North Dakota, is ill in the hospital here.

Work on the skating and curling rink is being carried on despite the zero weather.

Sam Gibson is a patient in the local hospital. His condition is very critical at the time of writing.

The Anglican church will hold their lazarar this year in the I. O. O. F. hall, on Saturday, December 3rd.

Mrs. Buchanan gave a bridge party on Wednesday afternoon. Miss Grace Moore was the winner of high.

The first bridge drive given by the Catholic Women's League will be on November 25th, in the I. O. O. F. hall.

The Dempsey-Tunney fight pictures will be shown at the Rex theater on Monday and Tuesday, November 21 and 22.

The Ladies of St. John's Guild will hold their Xmas lazarar in the Odd Fellows' hall, Saturday, December 3, from 3 to 6.

Some threshing has been done in this district during the week in spite of the snow and cold. There is still a lot of threshing to be done hereabouts.

The Elks will again manage the local hockey team the coming season. A committee has been appointed to that end. A strong team will be entered in the Foot-hills League, and a good season's sport is confidently looked forward to.

J. W. Morrow has been laid up with a lame knee.

Mrs. T. P. Lewis is a patient in the local hospital this week.

George Armstrong, of Staveland, is a patient in the hospital here this week.

Nina Olmstead, daughter of Fay Olmstead, is a patient in the local hospital this week.

Dr. and Mrs. McMillan entertained at bridge on Thursday evening. It was a very enjoyable affair.

The Claresholm hospital has been full up this week. There were seventeen adult patients in on Thursday.

The Ladies' Aid of the United church will hold a bazaar and afternoon tea on Saturday, November 19, in the I. O. O. F. hall.

John Barrymore in "When a Man Loves," with Dolores Costello, at the Rex theater Friday and Saturday nights this week.

A meeting of the Curling Club will be held in the council chamber next Tuesday evening at 8 o'clock, for the election of slips.

Click! click! How the needles fly! Dainty fingers preparing the smartest of fashion's fancies for the fancy work booth of St. John's bazaar. Here may you safely select a dainty whimsey to express your Xmas greetings. Saturday, December 3rd, I. O. O. F. hall.

Winter's grip has remained unbroken during the past week minimum temperatures, ranging near zero and a few degrees below, with snowfall every day. High wind from the north Thursday night added to the discomfort and drifted the snow considerably.

The Bran Pie

"My name's Tommy. My mother sent me to bed last night without any supper, 'cause I was so bad. I went to sleep right away. And then — I heard the most awful noise — hundreds and dozens of kids tramping to the Big Bran Pie. And there was a lady there — with the blackest hair and a red dress. But it was the pie I wanted to see. Gosh! I bet my mother's sorry she sent me to bed. I might have grabbed one of those dolls for my baby — or maybe a watch for Dad!"
Try it December 3rd in the I. O. O. F. hall.

THE PEOPLE'S FORUM

Review-Advertiser.

Dear Editor:—

Who has the answer?

Question: Has anyone found the plug for the town water tank? It evidently was lost two weeks or so ago.

Note:—You are out of luck, if you get confined in quarantine in the Town of Claresholm unless you have a goodly number of relatives.

Dry, Dry, O how dry I am.
Citizen.

Canadian Buyers Profit by Canada's Export Trade

IN the distant reaches of Britain's far-flung empire you will find General Motors cars, built in Canada by Canadian craftsmen, from Canadian materials.

In five years over 110,000 automobiles have been sent overseas by General Motors of Canada to carry the standard of Canadian quality around the world.

This represents a truly important contribution to Canada's export trade.

It represents millions of dollars to be spent in wages to Canadian workmen, in the purchase of Canadian metals, wood, hides and

the countless other materials entering into the manufacture of General Motors cars.

And it represents a greatly augmented production of General Motors of Canada, resulting in lower costs of manufacture, in economies of purchasing, in greater savings of time and labor through greater volume.

Thus, because in India, in Egypt, in Malia, Ceylon or South Africa, someone is buying a General Motors car from Canada, General Motors can offer to you, in Canada, a product of higher quality at a lower price than otherwise possible.

Forty Thousand Miles of Air Routes Now in Operation Daily Throughout the World

One of the dangers of uncontrolled flying is that such facts and their frequent tragic consequences may blur the public mind to the enormous progress being made in the field of aerial aviation. One always hears of the "crashes" that often happen, sometimes gallant, sometimes foolishly, attempts to span the ocean. Less is heard of the steady, scientific conquests being made from year to year in making aviation one of the great forces in the modern world. Yet such conquests are being made. Today, for example, the total length of air routes operated throughout the world is almost 40,000 miles, of which 25,000 miles are in Europe, and about 10,000 miles in the United States. The annual traffic over these routes has increased from 1,000,000 miles flown in 1919 to about 12,000,000 miles in 1926.

The Imperial Airways Limited of Britain, established by the British Government, maintain and operate regular daily services between London, Paris and Cologne, London and Amsterdam, and a weekly service between Southampton and the Channel Islands. They have completed two and a half years of the most tenacious years during which they have a monopoly of the British air transport in Europe. During this period they have flown up approximately two and a quarter million miles and carried 100,000 passengers and 2,000 tons of goods with not one serious accident.

Not has Canada followed in aviation. Today the use of aviation in forest conservation, aerial survey and reconnaissance, and transportation in the remote parts of the country is well established. The pioneer work done by commercial organizations like the Provincias of British Columbia and the Dominion Government has been successful. Forest fire fighting and reconnaissance from the air are accepted today with out question as being quick, accurate and cheap. Since this work was first tried in Ontario and New Brunswick, 125,000 square miles of forest land have been mapped by this method. Fire detection and suppression by air are accepted in unqualified air, while suitable landing places can be found, as the only means of aerial protection, for the forest of Ontario, Manitoba, and Alberta are now under a system of protection by air.

Aerial photography for mapping purposes has made tremendous strides. In 1926, 70,000 square miles were photographed, and today a surveyor willingly undertakes the mapping of any district without the aid of aerial photography. In addition to the forest, survey, exploration and mining services are given, the Fisheries Branch is directly interested in today's aerial protection work on the Pacific coast; the Department of Agriculture realizes their possibilities, and the coast patrol has found that aerial insect pests like the forest damage each year in the crops and forests of the Dominion, and the Department of Customs are then to the advantage in prevention of smuggling. Practically every engineering service can use aerial photography or air transportation to advantage.

Flying has not supplanted the ground forces in any of these activities, but they find in aviation an instrument which increases the efficiency of their work to an extent not believable a few years ago. It may therefore be stated with confidence that these phases of aviation may be expected to grow and expand and to increase and secure the whole world country beyond the narrow strip along our southern border now served by the railways.

The successful operation of air transport lines in the United States and Europe is undoubtedly having its effect on public opinion in Canada and before long the problem of the establishment of similar facilities for fast communication by air must be faced. Our railways, roads and waterways, telephone, telegraph and radio networks compare favorably with similar services in any part of the world. Without them our present standard of living could not be maintained, and our trade would instantly languish, says the Journal, Ottawa. There is no reason to suppose that in the air Canada will lag behind other nations, and that the establishment of through routes for travel and communication by air will not follow. No one can provide a better field for air communications. The distances between the cities are great, and the climate favorable for flying. Available for such with suitable equipment, whether presents no insuperable obstacle to the continuous operation of air routes.

Mineral Foods For Poultry

Bones, Shells, Grits and Charcoal Are Recommended

Laying hens require a considerable percentage of mineral elements in their food. When they are confined, and in the winter time, it becomes necessary to supply these foods, and the question of the most suitable form in which they can be obtained becomes important. It is dealt with in a bulletin on "Poultry Feeds and Feeding," available at the Publication Branch of the Department of Agriculture at Ottawa. According to the bulletin, besides what is supplied through the feeding of alfalfa, clover, bran and other ordinary feeds, it is necessary to provide something that contains these elements in such quantities and conditions that they can be assimilated more freely. To do this, bones, shells, grits, and charcoal are generally used.

Green cut bone is an excellent poultry feed containing a high percentage of mineral elements. Bone meal or granulated bone may be used but is less effective. The most popular layer shells are the most popular. Laying hens consume large quantities of them. Grits, which are made by crushing rocks of different kinds into fine particles for different classes of fowl, are also in the grinding of the food in the gizzard. Some of the mineral elements are so difficult to assimilate, a hopper of granulated sea charcoal should be kept constantly before the birds. It is unhygienic, and is a valuable corrective of digestive disorders.

First Reindeer Round Up

Estimate Places Remain in Alaska at Thirty Thousand

Preparations are being made at Alaska, Alaska, for the first round-up of the estimated 30,000 reindeer in the Yukon-Norton River region. The exact rate of increase in the deer herds in this region.

Since reindeer were introduced into Alaska from Siberia, 25 years ago to ward off threatened starvation among the Eskimos, the rate of increase has far exceeded the department officials have predicted that Alaska ranges will be overstocked with the animals in another ten years unless reindeer meat finds a growing market in the U.S. during this time.

Birds Cured By Artificial Sunlight

Ultra-Violet Rays Being Used to Alleviate Zoonosis

Birds whose feathers cling unpropitiously to their backs when by all the laws of nature they should be moulted, are being helped along by ultra-violet rays, or "artificial sunlight," at the Bronx Zoo. The nature of the action of the ultra-violet rays was described by Dr. Charles V. Nohack, veterinarian at the Zoo, and Assistant Keeper of Birds, who runs the quarantine hospital for all sorts of feathered folk.

There is no great mystery about the action of the artificial sun rays. They help the bird to get rid of its old feathers and absorb in the body of a bird, calcium and phosphorus and other elements which are necessary for the growth of the new feathers. The result is that the feathers begin to drop out and make place for a new crop. As long as the bird is in the hospital, the Zoo officials care for the birds in such a way that they are not subjected to any undue stress or strain.

The first bird to be cured in this way was a male bird of the species, sulphur crested cockatoo from Australia. The bird was brought to the Zoo in a cage and was found to be suffering from a condition known as "feather loss." The bird was placed in the hospital and was treated with ultra-violet rays. The result was that the bird's feathers began to grow again and the bird was soon able to fly.

Other birds which are now in the quarantine hospital about the bird house are undergoing treatment for the acceleration of their moulting. One of these is a red-tailed hawk which is still improving, but not quite set up as yet. Still another is a female hummingbird which is recovering from a condition known as "feather loss." The bird was brought to the Zoo in a cage and was found to be suffering from a condition known as "feather loss." The bird was placed in the hospital and was treated with ultra-violet rays. The result was that the bird's feathers began to grow again and the bird was soon able to fly.

Threatened With Extinction

Salmon Catch On Fraser River Is Rapidly Decreasing

The salmon fishing industry on the Fraser River, British Columbia, is threatened with extinction. The pack of fish, which used to be sold in the city of that of last year to the same price. John P. Isadore, assistant commissioner of fisheries, on returning from his annual trip of inspection to the streams of the Fraser river above Hell's Gate, where once the fishery of salmon spawned in millions, stated that "It was like hunting for a needle in a haystack. In most cases I did not see or hear of a single fish of this year." He pointed out that four years hence, when the cycle of rocky existence is filled and the fish which should be spawned this year and would return to spawn in their native waters, there will be none for the nets of the fishermen or the tables of the canneries.

The halibut fishery of Pacific salmon is still a mystery notwithstanding the fact that the catch in Alaska has also been reduced about 50 per cent and the American authorities here are at a loss to know why this sudden failure to put forth an equal appearance on the fishing grounds. So far as British Columbia is concerned, the fishery is in a very serious state. The government is now agreed that fishing is too intensive and that the only remedy is to curtail operations. But governmental action is necessary to make any such agreement effective. "We cannot reduce the Fraser sockeye fishery any more," says the assistant commissioner, "and the only way to operate in the prevention of over-fishing," says the Vancouver Press.

"But we do control the fishing which is the cause of the situation of this province, and there we should see that the reason of the Fraser is the cause of the trouble," says the assistant commissioner. "The Fraser is not the only river in the world which is threatened with extinction." Toronto Mail and Empire.

One of these is a red-tailed hawk which is still improving, but not quite set up as yet. Still another is a female hummingbird which is recovering from a condition known as "feather loss." The bird was brought to the Zoo in a cage and was found to be suffering from a condition known as "feather loss." The bird was placed in the hospital and was treated with ultra-violet rays. The result was that the bird's feathers began to grow again and the bird was soon able to fly.

Other birds which are now in the quarantine hospital about the bird house are undergoing treatment for the acceleration of their moulting. One of these is a red-tailed hawk which is still improving, but not quite set up as yet. Still another is a female hummingbird which is recovering from a condition known as "feather loss." Dominion's Mineral Output May Shortly Outrank The Wheat Crop's Annual Value

New Pointers On McNeill Cheese

Milk Used Must Have High Percentage Of Butterfat

The process of the manufacture of McNeill cheese has become fairly well standardized and the results now obtained make it a product of the first quality among full-flavored cheeses. The whole process of making it is described in a pamphlet distributed by the Publications Branch, Department of Agriculture, Ottawa. New information concerning the cheese has been secured through recent experiments. It is now definitely known that the quality of the product is greatly affected by the percentage of butterfat of the milk from which it is manufactured. When cheese was made from separate lots of milk containing 2, 4, 6, 8, 10, 12, 14, 16, 18, 20, 22, 24, 26, 28, 30, 32, 34, 36, 38, 40, 42, 44, 46, 48, 50, 52, 54, 56, 58, 60, 62, 64, 66, 68, 70, 72, 74, 76, 78, 80, 82, 84, 86, 88, 90, 92, 94, 96, 98, 100. Price 20 cents the pattern.

(Copyright 1927)

295. How Fast Is the Population of the U. S. Increasing?
296. How Long Will There Be Enough Land?
297. How Long Will the World Have Enough Arable Land?
298. What Is the Windiest Place in the U. S.?
299. The Place Having the Least Wind?
300. How the Milk Supply Is Carried to the Cities?
301. Will the Motorship Displace the Steamship?

Correct answers given next week. See how many you can answer by that time.

ANSWERS TO LAST WEEK'S QUESTIONS

298. What Is Dry Ice?

A trade name for frozen carbon dioxide gas, familiar to us all in soda water. Solidifies at about 110 below zero, is snowy white, melts comparatively slowly, due to the fact that the gas given off is heavier than air and forms a coat blanket around the remaining part of the cake, insulating it from the warm air. When melting, it changes instantly into gas. While it now costs 10 times as much as "wet ice" its refrigerating qualities under certain conditions are 15 times as great. Its lasting qualities and absence of salts water when melting make it particularly desirable for some kinds of refrigeration.

299. What Dry Ice Will Do?

Dry ice placed in bottom of a paper carton will keep ice cream, through the hottest day; large quantities of ice cream are now being shipped New York to Chicago by express shipment weigh 150 lbs; packed in special boxes and dry ice, 50 lbs. Dry ice enables a refrigerator car to carry a much larger percentage of freight, out of which shipped New England to the Middle West requires an initial charge of 12,000 lbs ice and 1,200 lbs salt, with three re-loading en route, in all 17,000 lbs ice and 1,800 lbs salt. A like shipment through without re-loading with but 1,200 lbs of carbon dioxide gas.

299. The Prevailing Cost of Air Travel?

Range: 10c to 15c per mile; the charge for railroad travel is 36c per mile. Boston to New York, 232 miles, the charge is \$30 (about 10c per mile). The Colorado Airways, Inc., Chicago to Pueblo, 22 miles, \$15 round trip (10c mile). The Western Air Express, Salt Lake City to Los Angeles, 580 miles, \$150 round trip (10c mile). The Pacific Air Transport, Seattle to Los Angeles, 1,973 miles, \$112 one way (12c mile). The Stout Air Services, Detroit to Grand Rapids, 152 miles, communication look for 10c mile. \$140 (10c mile). The Northwest Airways, to begin soon Chicago to Minneapolis-St. Paul, 308 miles, round trip \$75 (9c mile).

299. Latest Use of Radio in Train Operation?

On moving freight trains of 70 to 125 cars engine and caboose are separated by as much as a mile, with no positive means of communication between them. Signals are exchanged by whistle or flare lights, which often fail due to curvature of track or weather conditions. In case of train defects a brakeman must travel the length of train or conductor must stop train by operating the conductor valve. In recent experiments of the General Electric Company engine and caboose each equipped with special radio sending and receiving equipment enabled engineer and conductor of a moving train to converse as easily by telephone.

299. The Economic Value of the Wild Life of America?

The wild-life resources of the U. S. (principally deer, elk, moose,

rabbits, waterfowl, mountain goats, mountain sheep and fur-bearing animals) if capitalized on a basis of 6 per cent annual income, represents more than a billion dollars, and through intelligent management management capable of great increase. On the other hand, certain forms of wild life, such as the stock-killing wolves and other predatory species; with many rodents, as the house rat, prairie dog and others, usually destroy forage crops and other property exceeding a half billion dollars in value, largely preventable by properly directed effort.

299. Value of the Wild Rabbit As Game?

The U. S. Biological Survey states that rabbits constitute probably the largest, cheapest and most generally available supply of game in the United States. State authorities estimated that about 465,000 cottontails were killed in New York State in 1918; 2,703,000 in Pennsylvania in 1919; 293,625 in Virginia in 1921. It seems fair therefore to assume that the total number of rabbits killed annually in the United States is not less than four for each hunter, or a total of about 25 million. At an average of 20c each the value of this supply of meat would be not less than five million dollars annually.

299. How Does New York City Get Its Water Supply?

Manhattan gets its water from the great Ashokan Reservoir, 100 miles away in the Catskills; capacity 130 billion gallons, water leads to cover all Manhattan Island 30 feet deep. Starting 600 feet above sea level, the water rushes to the city through enormous tunnels in solid rock. When the main tunnels reach the city they are 200 to 750 feet below the surface. From the tunnels the water is delivered through vertical standpipes to the street mains; and the pressure gradually reduced from 100 pounds to the square inch to 20 pounds in the small pipes, which carry it to the sixth floor of apartment houses; taller buildings are supplied from roof tanks, into which the water is pumped.

WHY NOT THE BEST?

When a very superior article can be had at the same price as an inferior article one has no hesitation in taking the latter one. That is human nature. In the Canadian newspaper field there is one "best," and that fact is admitted by all. The Family Herald and Weekly Star of Montreal is in a class entirely by itself and Canada is proud of it. It is a wonderful combination of three publications, a great newspaper, a clean, wholesome family magazine and an agricultural paper without an equal. All three in one big 72 page paper, and all three for the price of one—only a dollar a year. You should have your own local paper without doubt, but your home would be enriched by the weekly visit of The Family Herald and Weekly Star. You will never regret it.

WOMEN'S INSTITUTE CONCERENCE

The Macleod-Clareholm Conferences held a very successful conference in the town hall at Macleod on Friday, Nov. 11th. A large crowd was in attendance and the day was a success. A number of delegates and speakers were unable to be present owing to the weather and roads, so the Pres. Officer Miss MacMillan of Edmonton, who was ill.

The District Director Mrs. Alcock of Champlain, and District Governor Mrs. Mulholland of Clareholm, were both present. Greetings from the National Council of Women, the Macleod W. I. and the Jubilee Girls Club were given by Miss Muir, Mrs. Greenwood and Mrs. Sutherland respectively. Mrs. Goodhue of Clareholm replying. The Mayor was unable to be present but sent regrets.

Splendid reports from five of the six Institutes were given; Willow Creek's delegate was not present. All showed good membership, fine, active, worth while work and good financial standing; Macleod specializing in cemetery work and Graham in vocal training in their school. Standoff, Oxbow and Willow Creek are just newly organized.

The Girls' Clubs gave very interesting reports. Jubilee G. C. of Macleod under the official su-

perision of Mrs. Sutherland is doing splendid work. The Harmony C. C. of Graham have recently reorganized with Mrs. Sutherland as supervisor; under her enthusiastic supervision, some splendid results may be expected. Starling and the Blue Bird G. C. of Clareholm are at rather a disadvantage, their members living so far apart, but with the supervision of Mrs. Foote and Mrs. Mosley both are doing much to aid the girls in preparing themselves for their position as the "women of tomorrow."

Splendid addresses were given by Mrs. Alcock and Mrs. Mulholland. Mrs. Alcock stressing the need for lowering the marriage death rate; that we as women must be helpful neighbors; our duty to our country and to our Institute and co-operation; giving support to our leaders; and in teaching our children obedience. They may be self-respecting citizens; also suggesting flower and vegetable shows at our conferences.

Mrs. Mulholland gave the report of the constituency work and to each other that we must not be satisfied with the past, we

W. I. CONFERENCE

(Continued from fourth page)

are either progressing or retro-
grading. We must keep the fires
of optimism burning. Also that
there may be easier occupations
in life but none unduly than grow-
ing bread to feed the nation.

Special music was given through-
out the program by Gramam and
MacLeod. A solo by Mrs. Gerson
of Gramam, a solo by Mrs. Irwin
of MacLeod, a monologue by Mrs.
Cutter of MacLeod, and a song
dance by two members of the Ju-
bilee G. C., all were much appre-
ciated.

At six thirty p.m. about one
hundred guests sat down to a
sumptuous banquet provided by
the Macleod ladies, to which all
did justice. The tables were pret-
tily decorated in commemoration
of Armistice Day. At the close
of the banquet, toasts followed.

The Conference then closed with
"God Save the King."
Officers elected for the coming
year were as follows: District
Governor, Mrs. D. Mithelland,
Clareholm, re-elected; Secretary-
Treasurer, Mrs. F. H. Laing,
Clareholm.

Conveners of Standing Com-
mittees—

Child-welfare and Better Health—

Mrs. J. C. Strang, Clareholm.

Edn. and Better Schools—Mrs.
Rowe, Ardenville.

Legislation—Mrs. Whipple,
Macleod.

Immigration—Mrs. Wanamaker,
Clareholm.

Household Economics—Mrs.
Perry, Macleod.

Agriculture—Mrs. O. Mosley,
Clareholm.

Canadianization and Nat. Ev-
ents—Mrs. Tilden, Gramam.

Canadian Products—Mrs. White,
Macleod.

The Conference for 1928 will be
entertained at the School of Agri-
culture, Clareholm.

District No. 7, I. O. O. F. held
their annual meeting at Gramam
on Tuesday afternoon and evening.
election of officers being the
outstanding business. I. O. O. F.
of Gramam was named for D. D.
G. M., succeeding W. Knight of
Clareholm; Fred Timbels, Mac-
leod, secretary-treasurer. Several
important resolutions, relative to
legislation, to be submitted to the
body were passed.

All Over Alberta Families Appreciate Home-baked Bread made from

SPILLERS "BAKE-RITE" Flour

Fresh from the oven—
crisp and crusty—with an
appealing aroma all its
own—what can equal the
home-baked loaf? There's
real nourishment in every
slice.

"Bake-Rite" is the perfect
flour for home baking. One
Macleod Housewife says:

"I found 'Bake-Rite' flour
very satisfactory in every
way. It makes beautiful
light bread and does not
take so much flour to mix
as the flour I have been
using."
